

OpenIMU335RI

Triple-Redundant 1.3°/h Open-Source IMU with CAN Output

The ACEINNA OpenIMU335RI is an easy-to-use high-performance 9-DOF open inertial platform packaged in a rugged sealed over-molded plastic housing. The OpenIMU335RI includes triple-redundant 3-Axis MEMS accelerometers and rate gyros which are fully calibrated over the operating temperature range. A 3-axis magnetic sensor is also available as an option. The processing power is provided by a 168MHz ARM M4 CPU with a Floating Point Unit. The OpenIMU335RI runs the OpenIMU open-source stack that includes an optimized 16-state Kalman Filter for Attitude and GPS-Aided Position-Velocity-Time (PVT) measurement. A free tool-chain based on VS Code supports PC, MAC, and Ubuntu.

OpenIMU335RI

Triple-Redundant 1.3°/h Open-Source IMU with CAN Output

The ACEINNA OpenIMU335RI is designed for use in 12 V and 24 V vehicle platforms. The plastic over-molded sealed packaging meets the challenging performance, reliability and cost requirements of the automotive, construction and agriculture vehicle markets. Advanced features allow the axes to be re-assigned by the user to accommodate any mounting orientation. A user accessible rotation matrix is available to adjust for mounting errors. OpenIMU335RS can consume and use Wheel Speed CAN messages available on the CAN bus to further improve accuracy. Supports user lever arm input.
